In addition, seven fora and two committees on Home Science, and Science and Society had also organised impressive scientific deliberations.

Drought in the Country

3832. SHRI NANA DESHMUKH: Will the Minister of AGRICULTURE be pleased to state:

(a) whether it is a fact that one-third area of the country is drought-prone and drought is an annual feature;

(b) whether it is also a fact that it is the high time for planning and implementing inter-river basin transfer with more water storage tanks and waste water utilization so that utilization of our resources could be done judiciously, to eradicate poverty; and

(c) if so, what immediate steps are being taken in this regard?

THE MINISTER OF STATE IN THE MINISTRY OF AGRICULTURE (SHRI SHRIPAD YESSO NAIK): (a) Yes, Sir. About 108 million hectares are drought prone and drought of varying magnitude does occur frequently in some parts of the country.

(b) and (c) The Central Water Commission has formulated a National Perspective Plan for Water Resources Development in the country which envisages inter-linking of various Himalayan rivers and Peninsular rivers for transfer of waters from surplus basins to water deficit basins including upper areas of Rajasthan for optimum utilization of water resources. For firming up the proposals of inter-linking the Peninsular as well as the Himalayan rivers, the Government of India have set up National Water Development Agency in 1982 which is carrying out pre-feasibility/feasibility level studies of linking of various rivers both in Peninsular as well as Himalayan Rivers Development Components.
